

DescriptionSpecificationWarrantyReviewsQnACountry Of Origin

This is a ESP32–CAM–MB MICRO USB Download Module for ESP32 CAM Development Board. The **ESP32–CAM AI–Thinker MB programmer Shield** is a shield that you attach to your ESP32–CAM board GPIOs. The programmer comes with the CH340C USB to serial chip. This allows you to program the ESP32–CAM using the USB port on the shield. The shield also comes with a RESET button. This may be useful to easily reset the ESP32–CAM or put it into flashing mode. **Note: The camera module is not included with the board. Note : Actual product may vary in terms of design.**

Features

1. Supports WiFi Image Upload.
2. Support multiple sleep modes.
3. Embedded Lwip and FreeRTOS.
4. Support secondary development.
5. Support STA/AP/STA+AP working mode.
6. Support OV2640 and OV7670 cameras, built-in flash.
7. Support Smart Config/AirKiss one-click network configuration.
